

## Microwave Water - See What It Does To Plants

Below is a science fair project. In it the student took filtered water and divided it into two parts. The first part she heated to boiling in a pan on the stove, and the second part she heated to boiling in a microwave. Then after cooling she used the water to water two identical plants to see if there would be any difference in the growth between the normal boiled water and the water boiled in a microwave. She was thinking that the structure or energy of the water may be compromised by the microwave. As it turned out, even she was amazed at the difference.

I have known for years that the problem with anything put in a microwave is not the radiation people used to worry about. It's how it corrupts the DNA in the food so the body cannot recognize it. So the body wraps it in fat cells to protect itself from the dead food or it eliminates it fast. Think of all the Mothers heating up milk in these "Safe" appliances. What about the nurse in Canada that warmed up blood for a transfusion patient, and she accidentally killed them when the blood went in dead. But the makers say it's safe. Never mind then, keep using them. Ask your Doctor I am sure they will say it's safe too. Proof is in the pictures of living plants dying. Remember You are also Living. Take Care.

## **Ten Reasons to Throw out your Microwave Oven**

From the conclusions of the Swiss, Russian and German scientific clinical studies, we can no longer ignore the microwave oven sitting in our kitchens. Based on this research, we will conclude this article with the following:

1. Continually eating food processed from a microwave oven causes long term - permanent - brain damage by "shorting out" electrical impulses in the brain [de-polarizing or de-magnetizing the brain tissue].
2. The human body cannot metabolize [break down] the unknown by-products created in microwaved food.
3. Male and female hormone production is shut down and/or altered by continually eating microwaved foods.
4. The effects of microwaved food by-products are residual [long term, permanent] within the human body.
5. Minerals, vitamins, and nutrients of all microwaved food is reduced or altered so that the human body gets little or no benefit, or the human body absorbs altered compounds that cannot be broken down.
6. The minerals in vegetables are altered into cancerous free radicals when cooked in microwave ovens.
7. Microwaved foods cause stomach and intestinal cancerous growths [tumors]. This may explain the rapidly increased rate of colon cancer in America.
8. The prolonged eating of microwaved foods causes cancerous cells to increase in human blood.
9. Continual ingestion of microwaved food causes immune system deficiencies through lymph gland and blood serum alterations.
10. Eating microwaved food causes loss of memory, concentration, emotional instability, and a decrease of intelligence.

Have you tossed out your microwave oven yet? After you throw out your microwave you can use a toaster oven as a replacement. It works well for most and is nearly as quick.

A convection oven is even better, as it cooks faster and more evenly and browns beautifully, too. (Convection ovens are inexpensive, and have a fan that distributes the heat more evenly. It is almost as fast as a microwave, and lots safer!)
