

EYE DROPS – begin with 1 drop/eye and build up to 4 drops/eye once or twice a day. This solution clears away any build-up or deposits in the eye, “said to” dissolve cataracts and improve eye sight.

7 T Distilled Water
2 T Best Grade Honey
1 T Pure Apple Cider Vinegar

Mix well and Store in a bottle or jar for refilling the dropper bottle (makes 2/3 cup of solution).

Place 20 drops of Colloidal Silver in a dropper bottle and fill the bottle with the above solution (see note on testing first). Shake and administer 1-4 drops/eye.

TEST before adding Colloidal Silver. This solution burns when placed in the eyes, you may dilute the solution with additional Distilled Water until more tolerable to you. It will continue to burn even diluted, however you might want it somewhat subtler than the original recipe until you get used to it.
